GIVE WITH PROOF, NOT FAITH

KAIROS

Transparent giving for Nigeria

A clear need. A named provider.
A receipt for every giver.

Sokenu Abigail · Omohuma Miracle

THE GIVING LOOP

01

Publish the need

A story with a budget.

02

Pay the provider

Spending tied to the bill.

03

Show each donor

Their share. Their receipt.

THE PROBLEM

A transfer succeeds. The doubt stays.

An appeal can move people without giving them a clear account of what happens next.

Is the appeal genuine?

Similar stories and screenshots make real needs harder to judge.

What did the money pay for?

A transfer confirms an account was credited, not that the bill was settled.

How does an organiser show it?

Honest fundraisers need a clear record they can share with supporters.

A WhatsApp appeal lands.

A hospital bill.
An account number.

You want to help.
What happens after you send it?

Donors need a clear path from their contribution to the expense.

THE SOLUTION

From a published budget to a personal receipt.

The story, the budget and the payment record stay connected throughout the cause.

01

Name the provider

An AI interviewer helps organise the story and costs into an itemised budget. Each expense names the hospital, school or supplier to be paid.

02

Protect the purpose

At launch, donations would sit with a licensed partner and go directly to checked providers against that budget. Organisers cannot withdraw cash.

03

Show every share

Each recorded payment creates a public entry and a personal update for every donor, showing their proportional share with a receipt.

Live custody and payments require a licensed partner. The prototype demonstrates the flow.

WORKING PROTOTYPE

What runs today.

Real application logic, demonstrated with simulated money movement.

Cause creation

AI-guided story, named providers and an itemised budget

Escrow accounting

Balances and payments against published budget items

Donor receipts

Proportional shares and automatic personal updates

Public records

The donations and payments behind each cause

BEFORE LIVE DONATIONS

Simulated

Bank transfers, Remita settlement and NIN lookup

Still to connect

CAC and account-name checks; licensed custody and live payments

Built with Next.js, TypeScript, MongoDB and Claude. No real donations have moved yet.

THE PEOPLE & THE MODEL

Useful to give. Sustainable to run.

A clearer account for supporters and the people organising help.

People with a real need

Help with a hospital bill, school fees or an emergency.

Community organisers

A shared record for churches, NGOs and informal groups.

Donors

A clear account of what their own gift helped pay for.

PROPOSED UPKEEP MODEL

2% **capped at ₦5,000 per cause**

Shown in naira before confirmation. Donors can cover the charge so the cause receives the full gift.

Tentative rate; pilot economics will be tested.

Intended surplus supports small causes. Grants, credits and sponsorship cover shared costs.

WHERE WE START

Start with a bill that can be checked.

A launch plan that builds on the same giving flow.

FIRST

School fees

Connect school fee references so contributions can settle a named student's bill directly with the institution.

NEXT

Hospital bills

Work with a small list of hospitals, checking registration, accreditation and payout accounts before pilot use.

LATER

Community support

Extend to church and alumni welfare, NGO programmes and workplace collections once the first flow is proven.

Prove the full loop on a few real causes, then widen it.

SAFEGUARDS

Accountability has rules.

Spending limits run in code. Live identity, provider checks and custody remain integration work.

BUILT

Spend within the budget

Payments cannot exceed the available balance or the expense's remaining budget.

BUILT

Keep spending visible

The cause page shows donations and recorded payments in a public history.

BUILT

Keep ID numbers private

The prototype stores the ID-check result, never the NIN number itself.

SIMULATED

Verify the organiser

The identity flow is present; the NIN lookup is simulated.

PLANNED

Check the provider

CAC and account-name checks before live payments to providers.

PLANNED

Use licensed custody

A licensed partner would hold donations and settle the payments.

The aim is to make each payment easier to check, with a clear record for every donor.

Hope Haven Foundation NGO · CAC verified @hopehaven · 20d

Keep 40 women safe - Hope Haven shelter, Q3

Our shelter houses 40 women escaping domestic abuse. Q3 costs: rent, food, counseling - fully itemized. As an NGO we publish every receipt; Kairos makes that automatic.

₦1,340,000 of ₦2,100,000 — 64% · 3 donors

How Kairos works

Donations sit in escrow. Organizers can't withdraw cash.

Payments go to verified vendors directly, never personal accounts.

Every payment comes back to you as a receipt for your share.

Every organizer is BVN or NIN verified

THE TEAM

Abigail and Miracle.

A shared focus on making giving easier to account for.
